Back-end Developer

Cairo, Egypt | +20 1018762368 | loayhesham82@gmail.com

PROFESSIONAL SUMMARY

Agile-trained Software Development Intern and Computer Science student specializing in Python and Django. Experienced in building end-to-end services, from database modeling to front-end integration. Leverages modern AI-assisted development workflows and "vibe coding" to accelerate delivery cycles while maintaining high code quality. Proven ability to collaborate effectively in sprint-based environments to deliver secure, user-centric backend architectures.

EDUCATION

Bachelor of Science in Computer Science

Sep2022 – June2026

CHI, Cairo

Core Coursework: Data Structures, Object-Oriented Programming (OOP), Database Management, Advanced Database Systems

EXPERIENCE

Software Development Intern (Django)

Jul – Sep 2025 & 2026

Very Academy

- Contributed to back-end API development using Django, supporting internal service integrations.
- Integrated REST APIs and handled data flow between backend services and client-facing layers.
- Collaborated within an agile team, participating in sprint planning, code reviews, and iterative delivery.
- Debugged and optimized application behavior across different environments and deployment configurations.

PROJECTS

Cara – E-Commerce REST API

Jan 2025 – Present

Django REST Framework, SQLite, JWT, Swagger

- Built a full-featured e-commerce backend with JWT authentication, product filtering, pagination, and a complete order management API.
- Designed and optimized relational database schemas using SQLite, applying indexing strategies and query analysis to reduce response times.
- Documented all API endpoints using Swagger/OpenAPI, producing clean integration contracts ready for front-end consumption.

FitVerse – Gym Management Platform

Jan 2026 – Present

Django, Google OAuth2, Calendar API, REST APIs

- Developed a gym management application integrating Google OAuth2 for authentication and Google Calendar API for workout session scheduling.
- Connected third-party REST APIs to support member tracking and fitness data flow between services.
- Structured the backend using Django's ORM with normalized schemas, ensuring data integrity across user, session, and booking models.

SKILLS

Languages	Python, SQL, JAVA, C++, C# (basic), HTML, CSS, JavaScript (basic)
Frameworks	Django, Django REST Framework (DRF)
Databases	PostgreSQL, SQLite, database schema design, query optimization
APIs & Services	REST API design, JWT Authentication, Google OAuth2, Google Calendar API, Swagger/
Tools & DevOps	Docker, docker-compose, Git, GitHub, GitHub Actions (CI/CD)
AI & Productivity	AI-assisted development workflows (vibe coding), Cursor
Operating Systems	Windows 11, Linux (basic)

TECHNICAL TRAINING

Web Programming - Dave Gray – Full Stack Web Developer / Instructor

- **Django & Python Back-End Development:** Server-side architecture, ORM, authentication, and REST API design.
- **JavaScript & Front-End Fundamentals:** DOM manipulation, fetch API, and single-page application concepts.
- **SQL & Database Design:** Relational schemas, migrations, query optimization, and data modeling.

Django REST Framework – Dave Gray – Full Stack Web Developer / Instructor & Self-Directed Study (Real Python / Official Docs)

- **REST API Design & Best Practices:** Serializers, viewsets, JWT authentication, pagination, and versioning.
- **Google Services Integration:** OAuth2 authentication flow, Google Calendar API, and third-party API consumption.
- **API Documentation:** Swagger/OpenAPI spec generation using `drf-spectacular`.

LANGUAGES

Arabic (Native)
